

FULL STACK DEVELOPER

Are you passionate about creating organic online services focusing on functionality and usability? Would you like to work with a digital service provider, that genuinely gives customer reliability?

We want to strengthen our team of Full-stack developers at the development center in Turku (Åbo) in Finland. You'll create state-of-the-art online services for our Finnish and European customers. You'll work closely with colleagues of designers, other developers, partners and at times, with customers.

You'll join a fast-growing IoT company with a very skilled team of great colleagues. Our customers rely on our professionalism and passion in achieving their goals. You should expect to work on a wide range of projects and tasks based on your interests and special expertise. You can also influence the operating methods and direction of our services.

We build a world-class service utilized by our customers every hour every day, so accuracy in combination with creativity is important. You will have room to develop your own professional expertise extensively in many areas.

As an experienced Full-stack developer, you will

- Design and implement user-friendly, modern online services for our domestic and international customers
- Work in close cooperation with colleagues near and far
- Manage projects holistically or as a piece of a larger project
- Evaluate viability of new technologies, solutions, tools, and services.

Desirable skills from the Professional we are looking for:

- some work experience (3+ years of experience desirable) but you as a person are most important
- experience of front-end and back-end, both or focusing on one
- good understanding of microservice architectures and implementation
- fluent English is important, and good Finnish is a must. An advantage is additional language skills

Experience in working with some of the following technologies:

- JavaScript/Typescript, C#, .NET Core, MySQL, MongoDB, C++.
- experience in modern web framework
- possibly experience in DevOps and cloud ecosystems
